

Jellyfin Web Client

Sign in to Jellyfin in a browser and save the streaming site for easy access.

- [🔖 Web browser sign-in \(Jellyfin\)](#)

☐☐ Web browser sign-in (Jellyfin)

Stream Jellyfin in a current version of Chrome, Edge, Safari, or Firefox on your computer, phone, or tablet.

Before you start

- Be an **active member of the Discord** and have the Jellyfin **username and password provided there**. Ask Cruv for a Jellyfin account if you do not have one.
- Use your supplied **username, not your email**. An Emby account is not automatically your Jellyfin account.

Open the site and sign in

1. Open <https://jellyfin.blackbeardsvault.com>.
2. Enter your Discord-provided **Username** and **Password**. If only profiles are shown and yours is missing, use manual login.
3. Select **Remember me** only on your own device if offered, then choose **Sign In**.

Expected result: your home screen and available libraries appear. Open a title and test playback.

Save the site

On a computer, press **Ctrl+D** on Windows or **Command+D** on Mac to bookmark it. On mobile, use **Add to Home Screen** if your browser offers it. Sign out when using a shared device.

This browser can also authorize a new device using [Quick Connect](#).

Troubleshooting

- **Cannot connect:** recheck `https://jellyfin.blackbeardsvault.com`, including `https://`. Try [browser sign-in](#) to see whether the same address and account work.
- **Wrong saved server:** return to server selection and add the correct address. Do not reinstall as the first step.
- **Sign-in rejected:** check for spaces and use your supplied username. Stop repeated attempts and ask Cruv for help if it still fails.
- **Browsing works but video fails:** update and reopen the app, try another title, and report the exact error. Keep streaming quality on **Auto** where available; codec and subtitle support varies by device.

Contact **@Captain Cruv** in **#support-channel** on Discord. Include the device model, app name/version, exact error, and when it happened. Never post your password.
