Samsung TV Apps

Install and sign in to Jellyfin on compatible Samsung Tizen televisions.

- Samsung TV sign-in (Jellyfin)

□□ Samsung TV sign-in (Jellyfin)

SAMSUNG TV · JELLYFIN

Start watching.

Use the free Jellyfin app from your TV’s app store.

Use the Jellyfin username and password from Cruv. Need an account? Ask Cruv on Discord (active members).

1 Install Jellyfin

On your TV, open **Home → Apps**, search for **Jellyfin**, and install it.

Can’t find it? Send Cruv your TV model. App availability depends on the model and region.

2 Add Blackbeard’s Vault

Open Jellyfin and choose to add a server. Enter the address below, then connect.

COPY THIS SERVER ADDRESS

`https://jellyfin.blackbeardsvault.com`

> **Keep the s in https://** — copy the whole address exactly.

3 Sign in

Choose your profile, or **Manual Login** if yours is not listed. Enter your Jellyfin username and password, then sign in.

> **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

You’re ready to watch.

Your libraries should appear. Pick a movie or episode and press **Play**.

Help when you need it

Use another device to sign in

Quick Connect lets an already signed-in phone or computer approve the device you’re setting up. Use it when your app shows a **Quick Connect** code.

1. Keep the code visible on the new device.
2. On a phone or computer, open Blackbeard’s Vault Jellyfin and sign in to the same Jellyfin account. If typing the address, keep the **s** in **https://**. Usernames are **case-sensitive**; match the capital and lowercase letters exactly.
3. Open your user/profile menu, choose **Quick Connect**, enter the new device’s code, and confirm.

If Quick Connect is unavailable, use password sign-in on the new device. A local app PIN is a different optional setting.

Something not working?

- **Can’t connect?** Check the **s** in **https://** and copy the full server address again. Don’t add a port number.
- **Can’t sign in?** Match every capital and lowercase letter in your username. Use your Jellyfin account, not your email or an Emby login. Remove accidental spaces.
- **Video or sound problem?** Close and reopen the app, check for an update, and try another title.

Still stuck? Message **@Captain Cruv** on Discord. Include your device, the app name, and a picture or the exact wording of the error. Never send your password.

Advanced alternative: Moonfin

The official Jellyfin store app is the easiest setup here. **Moonfin is a strong alternative if playback or navigation disappoints**, but requires manual installation rather than this TV's app store.

Moonfin requires a Tizen developer/certificate installation. The project targets Tizen 2.4+ (2016+), with a separate Legacy build for 2016 models.

Use Moonfin's Smart-TV installation instructions for your exact model. After installation, enter this full address in Moonfin's server field:

COPY THIS SERVER ADDRESS

```
https://jellyfin.blackbeardsvault.com
```

> **Keep the s in https://** — copy the whole address exactly.

When asked to sign in, use the Jellyfin username and password from Cruv.

> **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

Why this app? Details and sources

Use the official Jellyfin app from the TV's store first. It installs and updates through the store on supported models. User reports differ by model, and do not establish a universal Moonfin playback advantage.

Moonfin remains a worthwhile advanced alternative if the store app disappoints.
