Want to change your password? Follow Change your password (Jellyfin). If you have forgotten it or cannot sign in, contact Cruv on Discord.

Use another device to sign in

Quick Connect lets an already signed-in phone or computer approve the device you're setting up. Use it when your app shows a **Quick Connect** code.

1. Keep the code visible on the new device.
2. On a phone or computer, open Blackbeard's Vault Jellyfin and sign in to the same Jellyfin account. If typing the address, keep the **s** in **https://**. Usernames are **case-sensitive**; match the capital and lowercase letters exactly.
3. Open your user/profile menu, choose **Quick Connect**, enter the new device's code, and confirm.

If Quick Connect is unavailable, use password sign-in on the new device. A local app PIN is a different optional setting.

Why do different devices use different apps?

We choose by device: Streamyfin on phones and tablets, Wholphin on Android / Google TV, Swiftfin on Apple TV, and the official apps on Roku, Fire OS, Samsung, and LG. Computers can start in the browser. Moonfin remains a strong alternative. Follow your device's guide; you do not need to compare every app.

See the app recommendations

Something not working?

- **Can’t connect?** Follow the address step in your device’s guide. Copy the full https:// address, including the s, and don’t add a port number.
- **Can’t sign in?** Match every capital and lowercase letter in your username. Use your Jellyfin account, not your email or an Emby login. Remove accidental spaces.
- **Video or sound problem?** Close and reopen the app, check for an update, and try another title.

Still stuck? Message **@Captain Cruv** on Discord. Include your device, the app name, and a picture or the exact wording of the error. Never send your password.

How we choose the apps

We weigh everyday user experience against maintenance history, recent fixes, installation effort, and cost. A new design alone does not make an app the best default.

Moonfin remains a strong alternative. Each device guide explains how to use it where practical. Keep an app that already works well; there is no need to switch just to match this list.

These are recommendations from published releases and dated owner reports, not a controlled speed or playback test on every device.

Why the recommendation differs by device

- **iPhone / iPad:** Streamyfin’s mobile experience and active fixes make it the starting point; Moonfin stays a free alternative.
- **Android phone / tablet:** Streamyfin is a practical all-round mobile choice, including downloads. Findroid can feel smoother for some users, but its direct-play-only approach is less forgiving when a file needs conversion.
- **Android / Google TV:** repeated comparisons favor Wholphin’s navigation. It has a shorter history than official Jellyfin, so the official app and Moonfin remain alternatives.
- **Apple TV:** Swiftfin is the free official video app, with substantial recent TV improvements. Moonfin is a strong free alternative.
- **Fire OS and Roku:** start with the older, actively maintained official apps. Alternative clients can help with specific hardware or playback problems.
- **Samsung / LG:** the official store app is easiest to install and keep updated. Moonfin requires more advanced installation.
- **Computers:** the browser avoids installation and desktop-client transitions. Moonfin is a prominent free native alternative.
- **Vega OS:** availability and independent history are still limited. Check compatible Amazon-store apps on the actual model with Cruv.

Why this app? Details and sources

App recommendations are platform specific. Moonfin is an alternative wherever another client has the stronger current experience or maintenance case.

Questions about the choices

How we choose the apps

We weigh everyday user experience against maintenance history, recent fixes, installation effort, and cost. A new design alone does not make an app the best default.

Moonfin remains a strong alternative. Each device guide explains how to use it where practical. Keep an app that already works well; there is no need to switch just to match this list.

These are recommendations from published releases and dated owner reports, not a controlled speed or playback test on every device.

Why the recommendation differs by device

- **iPhone / iPad:** Streamyfin’s mobile experience and active fixes make it the starting point; Moonfin stays a free alternative.
- **Android phone / tablet:** Streamyfin is a practical all-round mobile choice, including downloads. Findroid can feel smoother for some users, but its direct-play-only approach is less forgiving when a file needs conversion.
- **Android / Google TV:** repeated comparisons favor Wholphin’s navigation. It has a shorter history than official Jellyfin, so the official app and Moonfin remain alternatives.
- **Apple TV:** Swiftfin is the free official video app, with substantial recent TV improvements. Moonfin is a strong free alternative.
- **Fire OS and Roku:** start with the older, actively maintained official apps. Alternative clients can help with specific hardware or playback problems.
- **Samsung / LG:** the official store app is easiest to install and keep updated. Moonfin requires more advanced installation.

- **Computers:** the browser avoids installation and desktop-client transitions. Moonfin is a prominent free native alternative.
- **Vega OS:** availability and independent history are still limited. Check compatible Amazon-store apps on the actual model with Cruv.

Why this app? Details and sources

App recommendations are platform specific. Moonfin is an alternative wherever another client has the stronger current experience or maintenance case.

Streamyfin fixes · Android TV comparisons · Recent mixed client reports · iOS owner comparisons · Swiftfin releases · Official Jellyfin apps · Moonfin releases

Reviewed 19 October 2026. Recommendations weigh user reports, current fixes, maintenance history, and installation effort. Reports are not a benchmark on every device.

Amazon Firestick & Fire TV Apps

Start with official Jellyfin on Fire OS. Check newer Vega OS models separately; Moonfin and Wholphin are alternatives where compatible.

□□□ Amazon Fire TV sign-in (Jellyfin)

FIRE TV · FIRE STICK

Start watching.

Use the official Jellyfin app on Fire OS.

Use the Jellyfin username and password from Cruv. Need an account? Ask Cruv on Discord (active members).

Some newer Fire TVs use Vega OS. Check **Settings → My Fire TV → About**. If yours says Vega OS, use the Vega instructions below instead of these Fire OS steps.

1 Install Jellyfin

Open the **Amazon Appstore** on the TV, search for **Jellyfin**, and install it if offered for your device.

Jellyfin on Amazon →

If it is not offered, send Cruv your exact model and software version from **Settings → My Fire TV → About**.

2 Add Blackbeard’s Vault

Open Jellyfin and choose **Enter server address**. Enter the address below, then choose **Connect**.

COPY THIS SERVER ADDRESS

```
https://jellyfin.blackbeardsvault.com
```

> **Keep the s in https://** — copy the whole address exactly.

3 Sign in

Choose **Add account** if shown, then **Use a password**. Enter your **Username** and **Password**, then choose **Sign in**.

> **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

You’re ready to watch.

Choose a movie or episode and press **Play**.

Try Moonfin instead — free alternative

Moonfin is a strong alternative for this Fire OS device. Try it if you prefer its layout or the recommended app struggles with a particular title. It uses the same Jellyfin account.

Get Moonfin →

1. Install and open **Moonfin**.
2. Choose **Add Server**. Enter the address below in **Server Address**, then choose **Connect**.

   COPY THIS SERVER ADDRESS

   `https://jellyfin.blackbeardsvault.com`

   > **Keep the s in https://** — copy the whole address exactly.

3. If you see **Who's watching?**, choose your profile or **Add User**. If a sign-in code appears, choose **Password**. Enter your Jellyfin username if asked, then your password, and choose **Sign In**.

   > **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

   Choose **Skip setup** if asked about appearance, then choose a title and press **Play**.

Moonfin's extra server features are optional for normal viewing. Moonfin's setup instructions.

Help when you need it

Use another device to sign in

Use this only when the app you are setting up shows a **Quick Connect** code.

1. Keep that code visible on the new device.
2. On a phone or computer, open Blackbeard's Vault Jellyfin. If typing the address, keep the **s** in **https://**. Sign in with your Jellyfin username and password. **Usernames are case-sensitive**; match the capital and lowercase letters exactly.
3. Open your user/profile menu, choose **Quick Connect**, enter the new device's code, and confirm.

If Quick Connect is unavailable, use the app's username and password sign-in. A local app PIN is separate from your Jellyfin password.

Something not working?

- **Can't connect?** Check the **s** in **https://** and copy the full address again. Don't add a port number.
- **Can't sign in?** Match every capital and lowercase letter in your username. Use your Jellyfin account, not your email or an Emby login. Remove accidental spaces.

- **Video or sound problem?** Update the app, reopen it, and try another title. The Moonfin alternative is another option.

Still stuck? Message **@Captain Cruv** on Discord. Include your device, app, and the exact error or a picture. Never send your password.

Try Wholphin — especially on newer Fire TV hardware

Wholphin often gets good reports for its TV interface. Older Fire Sticks can be slower with it, so the official Jellyfin app stays the first choice here.

Get Wholphin →

1. Choose **Add Server → Enter server address**. Enter the full address in **Enter Server IP or URL**, then choose **Submit**.

   COPY THIS SERVER ADDRESS

   `https://jellyfin.blackbeardsvault.com`

   > **Keep the s in https://** — copy the whole address exactly.

2. Choose **Add User**, then **Use username/password** if a code is shown. Enter your **Username** and **Password**, then choose **Login**.

   > **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

Newer Fire TV with Vega OS

Vega OS uses different apps from Fire OS. Android APKs, Wholphin, and the official Android TV app are not substitutes.

Check the TV's **Amazon Appstore** for **Astra** or a **Moonfin** version explicitly compatible with Vega. Availability depends on your model and region. If neither is offered, ask Cruv with your model and software version; avoid manual developer installation for this setup.

In the compatible app's server field, use this complete address:

COPY THIS SERVER ADDRESS

```
https://jellyfin.blackbeardsvault.com
```

> **Keep the s in https://** — copy the whole address exactly.

When it asks for an account, use the Jellyfin username and password from Cruv.

> **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

Astra compatibility · Moonfin platform notes

Why this app? Details and sources

Official Jellyfin has a longer maintenance history and is a conservative choice for older or unknown Fire OS hardware. Owners of newer 4K

devices often like Wholphin; some older Fire Sticks struggle with its animations. Vega clients are newer, with too little independent evidence for a confident universal winner.

Official Android TV / Fire OS releases · Fire TV owner reports · Wholphin supported platforms · Astra release history · Moonfin Vega release

Reviewed 19 October 2026. Recommendations weigh user reports, current fixes, maintenance history, and installation effort. Reports are not a benchmark on every device.

Android Apps

Use Streamyfin on Android phones and tablets, and Wholphin on Android TV or Google TV. Both guides include Moonfin as a strong free alternative.

Android (mobile) sign-in

ANDROID PHONE OR TABLET · STREAMYFIN

Start watching.

Use Streamyfin for an easy, free mobile setup.

Use the Jellyfin username and password from Cruv. Need an account? Ask Cruv on Discord (active members).

1 Install Streamyfin

Install **Streamyfin** from your device’s app store.

Get Streamyfin →

2 Add Blackbeard’s Vault

Open **Streamyfin**. In **Server URL**, enter the address below, then choose **Connect**.

COPY THIS SERVER ADDRESS

`https://jellyfin.blackbeardsvault.com`

> **Keep the s in https://** — copy the whole address exactly.

3 Log in

Enter the **Username** and **Password** Cruv sent you, then choose **Log in**.

> **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

You’re ready to watch.

Pick a movie or episode and press **Play**.

Want to download for a trip?

Ask Cruv for download access and wait for approval first. Then follow Downloading Media.

Try Moonfin instead — free alternative

Moonfin is a strong alternative for this Android phone or tablet. Try it if you prefer its layout or the recommended app struggles with a particular title. It uses the same Jellyfin account.

Get Moonfin →

1. Install and open **Moonfin**.
2. Choose **Add Server**. Enter the address below in **Server Address**, then choose **Connect**.

   COPY THIS SERVER ADDRESS

   `https://jellyfin.blackbeardsvault.com`

   > **Keep the s in https://** — copy the whole address exactly.

3. If you see **Who’s watching?**, choose your profile or **Add User**. If a sign-in code appears, choose **Password**. Enter your Jellyfin username if asked, then your password, and choose **Sign In**.

   > **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

   Choose **Skip setup** if asked about appearance, then choose a title and press **Play**.

Moonfin’s extra server features are optional for normal viewing.

Moonfin’s setup instructions.

Help when you need it

Something not working?

- **Can’t connect?** Check the **s** in **https://** and copy the full address again. Don’t add a port number.
- **Can’t sign in?** Match every capital and lowercase letter in your username. Use your Jellyfin account, not your email or an Emby login. Remove accidental spaces.

No app to install.

Use the Jellyfin website on your phone, tablet, or computer.

Use the Jellyfin username and password from Cruv. Need an account? Ask Cruv on Discord (active members).

1 Open Blackbeard’s Vault

Open Jellyfin →

Or copy this address into your browser:

COPY THIS SERVER ADDRESS

`https://jellyfin.blackbeardsvault.com`

> **Keep the s in https://** — copy the whole address exactly.

2 Sign in

Enter the Jellyfin username and password Cruv gave you, then choose **Sign In**. If only profiles are shown, use **Manual Login** when yours is missing.

> **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

You’re ready to watch.

Your libraries should appear. Pick a movie or episode and press **Play**.

Want to download for a trip?

Ask Cruv for download access and wait for approval first. Then follow Downloading Media.

Try Moonfin instead — free alternative

Moonfin is a strong alternative for this device. Try it if you prefer its layout or the recommended app struggles with a particular title. It uses the same Jellyfin account.

Get Moonfin →

1. Install and open **Moonfin**.
2. Choose **Add Server**. Enter the address below in **Server Address**, then choose **Connect**.

   COPY THIS SERVER ADDRESS

   `https://jellyfin.blackbeardsvault.com`

   > **Keep the s in https://** — copy the whole address exactly.

3. If you see **Who's watching?**, choose your profile or **Add User**. If a sign-in code appears, choose **Password**. Enter your Jellyfin username if asked, then your password, and choose **Sign In**.

   > **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

   Choose **Skip setup** if asked about appearance, then choose a title and press **Play**.

Moonfin's extra server features are optional for normal viewing. Moonfin's setup instructions.

Help when you need it

Want to change your password? Follow Change your password (Jellyfin). If you have forgotten it or cannot sign in, contact Cruv on Discord.

Save it for next time

On a computer, press **Ctrl+D** on Windows or **Command+D** on Mac to bookmark the site. On a phone, use **Add to Home Screen** if your browser offers it. Use **Remember me** only on your own device.

Use another device to sign in

Quick Connect lets an already signed-in phone or computer approve the device you're setting up. Use it when your app shows a **Quick Connect** code.

1. Keep the code visible on the new device.
2. On a phone or computer, open Blackbeard's Vault Jellyfin and sign in to the same Jellyfin account. If typing the address, keep the **s** in **https://**. Usernames are **case-sensitive**; match the capital and lowercase letters exactly.
3. Open your user/profile menu, choose **Quick Connect**, enter the new device's code, and confirm.

If Quick Connect is unavailable, use password sign-in on the new device. A local app PIN is a different optional setting.

Something not working?

- **Website won’t open?** Keep the **s** in **https://**, check your connection, and try another current browser.
- **Sign-in rejected?** Match your username’s capital and lowercase letters exactly. Use the Jellyfin username Cruv gave you, not your email. Remove accidental spaces.
- **Video won’t play?** Reload the page, update the browser, and try another title. The Moonfin setup in the computer guide can help with files your browser does not play well.

Message **@Captain Cruv** on Discord with your device, browser, and the exact error. Never send your password.

Want an app on your computer?

Use the computer guide with Moonfin setup. Moonfin also has a separate web interface that needs server setup. Cruv will provide its address if offered; keep using the Jellyfin address above for this browser guide.

Reviewed 19 October 2026. App menus and store availability can change.

LG TV Apps

Install and sign in to Jellyfin on compatible LG webOS televisions.

□□ LG TV sign-in (Jellyfin)

LG TV · JELLYFIN

Start watching.

Use the free Jellyfin app from your TV’s app store.

Use the Jellyfin username and password from Cruv. Need an account? Ask Cruv on Discord (active members).

1 Install Jellyfin

On your TV, open **Apps** or **LG Content Store**, search for **Jellyfin**, and install it.

Can’t find it? Send Cruv your TV model. App availability depends on the model and region.

2 Add Blackbeard’s Vault

Open Jellyfin and choose to add a server. Enter the address below, then connect.

COPY THIS SERVER ADDRESS

`https://jellyfin.blackbeardsvault.com`

> **Keep the s in https://** — copy the whole address exactly.

3 Sign in

Choose your profile, or **Manual Login** if yours is not listed. Enter your Jellyfin username and password, then sign in.

> **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

You’re ready to watch.

Your libraries should appear. Pick a movie or episode and press **Play**.

Help when you need it

Use another device to sign in

Quick Connect lets an already signed-in phone or computer approve the device you’re setting up. Use it when your app shows a **Quick Connect** code.

1. Keep the code visible on the new device.
2. On a phone or computer, open Blackbeard’s Vault Jellyfin and sign in to the same Jellyfin account. If typing the address, keep the **s** in **https://**. Usernames are **case-sensitive**; match the capital and lowercase letters exactly.
3. Open your user/profile menu, choose **Quick Connect**, enter the new device’s code, and confirm.

If Quick Connect is unavailable, use password sign-in on the new device. A local app PIN is a different optional setting.

Something not working?

- **Can’t connect?** Check the **s** in **https://** and copy the full server address again. Don’t add a port number.
- **Can’t sign in?** Match every capital and lowercase letter in your username. Use your Jellyfin account, not your email or an Emby login. Remove accidental spaces.
- **Video or sound problem?** Close and reopen the app, check for an update, and try another title.

Still stuck? Message **@Captain Cruv** on Discord. Include your device, the app name, and a picture or the exact wording of the error. Never send your password.

Advanced alternative: Moonfin

The official Jellyfin store app is the easiest setup here. **Moonfin is a strong alternative if playback or navigation disappoints**, but requires manual installation rather than this TV's app store.

Moonfin requires sideloading through LG Developer Mode and Dev Manager Desktop, or another documented method. Developer Mode installations need renewal. The project targets webOS 3+ (2016+).

Use Moonfin's Smart-TV installation instructions for your exact model. After installation, enter this full address in Moonfin's server field:

COPY THIS SERVER ADDRESS

```
https://jellyfin.blackbeardsvault.com
```

> **Keep the s in https://** — copy the whole address exactly.

When asked to sign in, use the Jellyfin username and password from Cruv.

> **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

Why this app? Details and sources

Use the official Jellyfin app from the TV's store first. It installs and updates through the store on supported models. User reports differ by model, and do not establish a universal Moonfin playback advantage.

Moonfin remains a worthwhile advanced alternative if the store app disappoints.

Official TV clients · TV user reports · Moonfin TV installation

Reviewed 19 October 2026. Recommendations weigh user reports, current fixes, maintenance history, and installation effort. Reports are not a benchmark on every device.

Roku Apps

Start with the official Jellyfin Roku app. Moonfin is a strong interface alternative; JellyRock is another option for playback problems.

□□ Roku app sign-in (Jellyfin)

ROKU · JELLYFIN

Start watching.

Use the official Jellyfin app from the Roku store.

Use the Jellyfin username and password from Cruv. Need an account? Ask Cruv on Discord (active members).

1 Install Jellyfin

On your Roku, open **Streaming Store**, search for **Jellyfin**, and add the app.

Jellyfin on Roku →

2 Add Blackbeard’s Vault

In **Connect to Server**, use the field labelled **…or enter server URL manually:**. Enter the address below, choose **OK** on the keyboard, then choose **Submit**.

COPY THIS SERVER ADDRESS

`https://jellyfin.blackbeardsvault.com`

> **Keep the s in https://** — copy the whole address exactly.

3 Sign in

Choose your profile if it is shown, or choose **Manual Login**. Enter your **Username** and **Password**, then choose **Submit**.

> **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

You’re ready to watch.

Choose a movie or episode and press **Play**.

Try Moonfin instead — free alternative

Moonfin is a strong alternative for this Roku. Try it if you prefer its layout or the recommended app struggles with a particular title. It uses the same Jellyfin account.

Get Moonfin →

1. Install and open **Moonfin**.
2. Choose **Enter Server URL**, enter the address below, then choose **Connect**.

   COPY THIS SERVER ADDRESS

   `https://jellyfin.blackbeardsvault.com`

   > **Keep the s in https://** — copy the whole address exactly.

3. Choose the **Password** tab, select or enter your username, enter your password, and choose **Sign In**.

   > **Your username is case-sensitive.** Match the **capital and lowercase letters** exactly as Cruv sent them. Use your **Jellyfin username**, not your email.

   Choose **Skip** if asked about appearance, then choose a title and press **Play**.

Moonfin’s extra server features are optional for normal viewing. Moonfin’s setup instructions.

Help when you need it

Something not working?

- **Can’t connect?** Check the **s** in **https://** and copy the full address again. Don’t add a port number.

- **Can’t sign in?** Match every capital and lowercase letter in your username. Use your Jellyfin account, not your email or an Emby login. Remove accidental spaces.
- **Video or sound problem?** Update the app, reopen it, and try another title. The Moonfin alternative is another option.

Still stuck? Message **@Captain Cruv** on Discord. Include your device, app, and the exact error or a picture. Never send your password.

Playback trouble? Another Roku option

JellyRock is another maintained Roku client, led by a former official-client maintainer. It can be worth trying for audio, subtitle, or playback problems. That history is useful, but does not guarantee every file will play better.

JellyRock installation →

Use the same full HTTPS server address and Jellyfin account. Ask Cruv if you need help choosing a Roku app.

Why this app? Details and sources

The official Roku app remains actively maintained and has a longer household-use history. Reports about alternate Roku clients are mixed; there is not enough evidence to replace it universally with Moonfin.

JellyRock’s maintainer history makes it a worthwhile playback alternative.

Still stuck? Message **@Captain Cruv** on Discord. Include your device, app, and the exact error or a picture. Never send your password.

Other desktop apps and playback choices

Already using Jellyfin Media Player successfully? You can keep using it. You do not need to migrate just for this guide.

Windows / Linux: Jellyfin MPV Shim is another option for users who want more playback control. Its full library interface is newer than its playback engine. Official downloads and instructions.

Some native apps handle audio, subtitles, or video formats better than a browser. If the browser struggles with a title, try Moonfin or ask Cruv.

Why this app? Details and sources

The browser is the easiest free starting point across computers. Current desktop clients are in transition: Jellyfin Desktop 2 is a prerelease, and MPV Shim's full browsing interface is new. A long-lived playback engine does not establish a new interface's reliability.

Change your password (Jellyfin)

JELLYFIN · ACCOUNT HELP

Change your password using a web browser on your phone or computer, even if you normally watch in a TV or mobile app.

1. Open Jellyfin

https://jellyfin.blackbeardsvault.com

> **Keep the s in https://**. Copy the whole address exactly.

Already signed in? Continue to step 2. Otherwise, sign in with your **Jellyfin username and current password**.

> **Your username is case-sensitive.** Match the capital and lowercase letters exactly as Cruv sent them. Use your server username, not your email address.

2. Open your profile

Select your **user icon in the top-right corner**, then choose **Profile**. The password fields are on that page.

3. Save your new password

Fill in these three fields:

- **Current password** — the password you use now.
- **New password** — the password you want to use.
- **New password confirm** — type the new password again.

Choose a strong, unique password and select **Save Password**. Wait for confirmation that it saved.

> Your username stays the same. If an app asks you to sign in again, use your **new Jellyfin password**. An app PIN is separate from this password.

Forgot your password or stuck?

Contact **@Captain Cruv on Discord** if you cannot sign in, the password controls are missing, or the change will not save. **Never send or post your current or new password.**

Back to Getting Started with Jellyfin

Verified instructions and sources

The menu path and field names were checked in Blackbeard’s Vault Jellyfin Web. Jellyfin’s documentation confirms users can change their own password in personal settings.

Jellyfin account documentation

Checked 20 October 2026.
